PERSONAL EDITION / VOL. 01

SEPTEMBER 2026
COLLEGE LIFE
ISSUE

FAISAL

FINDING MY OWN PATH

Learning what matters to me beyond grades, routines, and expectations.

BUILDING STRENGTH

Discipline in the gym, patience in the process, and progress that feels real.

TECHNOLOGY, LIFE & EVERYTHING IN BETWEEN

Curiosity about computers, new skills, and where technology can take me next.

DREAMS BEYOND THE CLASSROOM

Finishing college while creating a future that actually fits who I am.

THE PERSONAL GROWTH ISSUE

BECOMING THE BEST VERSION OF MYSELF

FAISAL L. MOHAMMAD

About Me

FAISAL L. MOHAMMAD

Still learning, still changing, still figuring out what feels right.

I'm a Computer Science student who is interested in technology and how it keeps changing the way we live and work. I like learning useful things, especially when I can see how they connect to real life.

Outside school, I enjoy going to the gym and working on myself physically. Fitness gives me a simple kind of discipline: show up, stay consistent, and improve little by little.

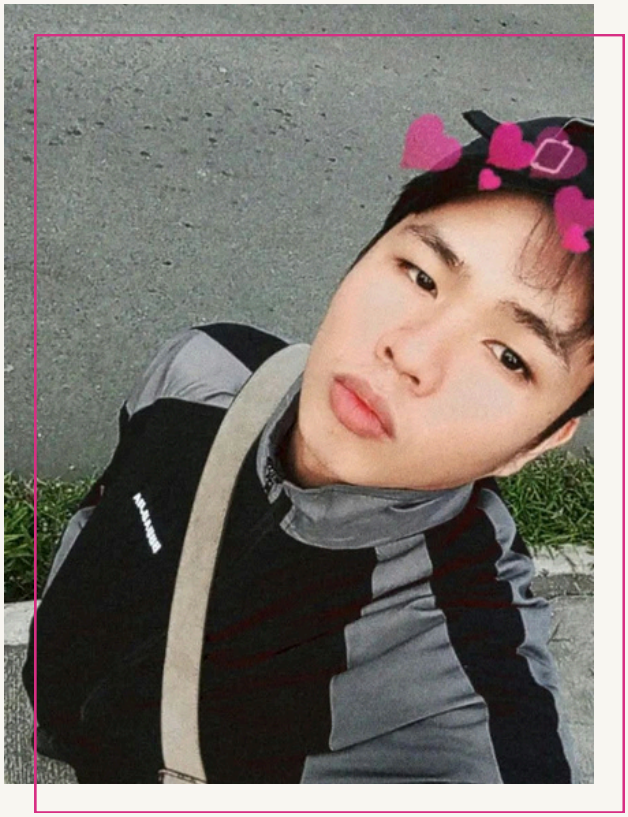

I also value personal growth. I don't have every part of my future planned yet, and I'm still discovering what direction I want to take in life and in my career. For now, I want to keep learning, build useful skills, and become more confident in the choices I make.

> *I may not have everything figured out yet, but I'm still moving forward.*

FAISAL L. MOHAMMAD

The things that keep me curious active, and grounded.

Life is not only about school. The things I do outside academics also shape how I think, how I grow, and how I see myself.

ON THE MOVE / ORDINARY MOMENTS

TECHNOLOGY

Curious about how things work

Computers and technology interest me because there is always something new to understand. I enjoy learning practical skills, exploring tools, and seeing how technology can solve everyday problems.

FITNESS

Stronger through consistency

Going to the gym helps me stay active and disciplined. I like seeing progress over time, whether it is becoming stronger, improving my routine, or simply staying committed on days when motivation is low.

EVERYDAY LIFE

Making space for normal moments

I appreciate going out, taking photos, spending time with people important to me, and enjoying life outside academics. Those simple moments help me reset and remind me that growth also happens away from a screen.

A good life, for me, is not about being busy all the time. It is about improving while still making room for the people, places, and moments that matter.

GOALS / FUTURE / GROWTH

The Road Ahead

My main goal right now is to finish college and keep improving myself along the way. I want to develop useful skills that can help me find work that suits me instead of forcing myself into a path that does not feel right.

I also want to become financially independent, maintain a healthy lifestyle, and continue building the discipline I am learning through school and fitness. I know my plans may change as I gain more experience, and I am okay with that.
What matters to me is creating a future I can be proud of - one built on steady progress, better choices, and a clearer understanding of the kind of life I want.

01 Finish college and keep developing practical, useful skills.

02 Find a career that fits my strengths, interests, and preferred lifestyle.

03 Work toward financial independence while staying healthy and active.

04 Keep learning and become more confident in my own direction.

I don't need to have my whole future figured out. I just need to keep becoming better than I was yesterday.
